

```
Desktop Documents Downloads Music Pictures Public Templates Videos
sysadmin@localhost:~$ ls
Desktop Documents Downloads Music Pictures Public Templates Videos
sysadmin@localhost:~$
```

`ls` command at the prompt, which will list the files and directories contained in your current working directory. In this example, no options or arguments will be used.

```
sysadmin@localhost:~$ ls -l
total 4
drwxr-xr-x 2 sysadmin sysadmin 6 Feb 8 2021 Desktop
drwxr-xr-x 4 sysadmin sysadmin 4096 Feb 8 2021 Documents
drwxr-xr-x 2 sysadmin sysadmin 6 Feb 8 2021 Downloads
drwxr-xr-x 2 sysadmin sysadmin 6 Feb 8 2021 Music
drwxr-xr-x 2 sysadmin sysadmin 6 Feb 8 2021 Pictures
drwxr-xr-x 2 sysadmin sysadmin 6 Feb 8 2021 Public
drwxr-xr-x 2 sysadmin sysadmin 6 Feb 8 2021 Templates
drwxr-xr-x 2 sysadmin sysadmin 6 Feb 8 2021 Videos
sysadmin@localhost:~$
```

`ls` command is used to list information about directories and files and by default it displays information for the current directory. Use the `-l` option to display this information in the long format, which gives additional information about files located in the current working directory:

```
sysadmin@localhost:~$ ls -l /home
total 0
drwxr-xr-x 1 sysadmin sysadmin 20 Sep 28 20:07 sysadmin
sysadmin@localhost:~$
```

`ls` command will list information for that directory. Use the argument `/home` to display detailed information about files in the `/home` directory.

```
sysadmin@localhost:~$ whoami
sysadmin
sysadmin@localhost:~$
```

`whoami` command, `sysadmin`, displays the user name of the current user.

```
sysadmin@localhost:~$ uname
Linux
```

uname command displays information about the current system

```
sysadmin@localhost:~$ history
 1  ls
 2  ls -l
 3  ls -l /home
 4  wjoami
 5  whoami
 6  uname
 7  history
sysadmin@localhost:~$
```

the **history** command shows commands you have previously typed in the terminal

```
sysadmin@localhost:~$ history 1
 8  history 1
sysadmin@localhost:~$ history 2
 8  history 1
 9  history 2
sysadmin@localhost:~$ history 8
 3  ls -l /home
 4  wjoami
 5  whoami
 6  uname
 7  history
 8  history 1
 9  history 2
10  history 8
sysadmin@localhost:~$ history 5
 7  history
 8  history 1
 9  history 2
10  history 8
11  history 5
sysadmin@localhost:~$
```

history command can take a number as a parameter to display exactly that many recent entries.

```
sysadmin@localhost:~$ echo Hello Students
Hello Students
sysadmin@localhost:~$
```

`echo` command can be used to print text and the value of a variable, and to show how the shell environment expands metacharacters
